ΟΥΡΑΝΙΑ ΔΩΜΑΤΑ

OR AN

ALMANACK

for the Year of our

LORD GOD

1694.

Being the second after Bissextile or Leap-year and from the Worlds Creation, 5643.

Wherein is contained the Lunations, Conjunctions and Aspects of the Planets, the increase, decrease and length of the day and night, with the rising, southing and setting of the Planets, and Fixed Stars throughout the Year, whereby may be known the exact hour of the night at all times, when either the Moon or Stars are seen.

Calculated according to Art and referred to the Horizon of the ancient and renowned Borough-Town of *Stamford*, whose Longitude is 14 degrees, Latitude 52 deg. 41 minutes, fitting all the middle Counties of ENGLAND, and without sensible error the whole Kingdom.

By *JOHN WING* Mathemat.

CAMBRIDGE,

Printed by *John Hayes*, Printer to the University, 1694.

Common Notes for this present Year, according to the

Julian, English or old account.		Gregorian or new account.

THis Table shews the Interest of any sum of Money from 1 s. to 100 l. from a day to a year. And by the help of Addition you may compute the Interest of any sum whatsoever. And note, that for the greater exactness the peny is divided into a 100 parts, so that 25 parts are a farthing, and 50 parts an half-peny, and 75 parts 3 farthings, &c.

Example:

The Interest of 100 l. for six months one Week and one day, is thus found by the Table.

		l.	s.	d.	q.		l.	s.	d.
Interest of 100 l.	for 6 mon.	03	0	0	00	viz.	3	2	7 half-peny.
	for 1 week,	00	2	3	61				
	for a day,	00	0	3	94				
		03	2	7	55				

A Regal Table in a more exact manner

The Year, Month, and Day, (accounting the Year to begin Jan. 1.) whereon every King and Queen of Eng. since the Conquest began their reign.				The number of Years, Months, and Days, that every K. and Q. reigned to reign: as also 28 da. to a month.						The num. of Y. expired in this Y. since they began to reign: as also since they ended.

Mary	2				long to Reign.							

Here Gods Vicegerents do in order stand
And how successively each Rul'd the Land,
May we not want a Monarch great indeed
Wise, good, and gratious, mercifull in need;
For such a one may all good Christians stand
Both now and always for to Rule this Land.

WING. 1694.

☞ Note that q stands for Quadrans a quarter of a part; ſ for ſemiſis half a part; and d for Dodrans three quarters of a part.

To find the true Hour of the Day by the former Table.

TAke a Staff of what length you please, and with a pair of Compasses divide it into ten equal parts marking them upon the Staff; then in some level place where the Sun doth shine, set it upright, and mark where the end of the shadow falls; which done, measure with your Staff the length of the shadow, and note the parts it contains, which find out in this Table right against the day of the month, and over head you will find the true hour of the day; as will appear more clearly by example.

Suppose the 9 of *April* or 13 of *August* I should find the shadow of the Staff to be 30 parts and a quarter of a part more, that is, three Staffs length, and a quarter of a part, therefore seeking in the Table, against the said days, I find 30 q. which is 30 parts and a quarter, and I see over head that it is then either 7 a clock in the morning, or 5 in the afternoon; so that if your observation was in the morning, it was 7 but if in the afternoon, 5 a clock.

Thus the 13 of *February*, or 8 of *October*, if the shadow of the Staff be just 19 parts, it is 12 a clock, if 10 it's one a clock, if 24 two a clock, if the observation be made in the afternoon.

Thus you see the hour of the Day is exactly and speedily found, by a Rod or Staff and the help of this Table; so likewise by the Kallender part may the hour of the Night be known either by the Moon, Planets, or Fixed Stars, being of excellent use to all sorts of Men.

A Compendious Chronology of Memorable things since the Creation to this Year 1694.

Launch forth my Muſe amongſt th' erratick Stars
And gently read their language in the wars.
Accepting as the wandring Stars foretel,
For that's moſt look't at whether well or ill,
Yet tho by Aſtral cauſes things are told,
Let none confide in that or be too bold.
For God who made the Stars, can alſo do
Their (Courſes when he pleaſes) overthrow.
And what's foretold by them can fruſtrate,
Or make their powers to reverberate.
The Stars derive their power ſo do we
From the great Author of Eternity.

Of the Spring Quarter.

ACcording to our former method, and the directions and Rules the ancient Aſtronomers have delivered us, we ſhall examin what time the ſun touches the firſt point of ♈, which according to the former Calculation (drawn from our own Tables in our *Scientia Stellarum*) happens *March* 9 Day 15 hours 7 min. P. M. or more vulgarly on the 10 day of *March* 7 minutes paſt 3 in the morning, for which time the Scheme is erected, the Planets places being deduced from our Tables before mentioned, which are now nearly ready for the Preſs, and I ſhall

shall here take leave to say thus much in vindication of them, *viz.* that they are grounded upon better Observations then any yet extant, which is the main reason of their differing so much from all other Tables, in the Sun, *Saturn*, and *Jupiter*, especially in this Age, and doth also correspond with the best Observations of all Ages, and the Planets places are hereby had with one third part of the labour then by any hitherto Printed, which every Judicious Artist cannot deny upon sight and examination thereof: and was I but as fortunate in the Printing it, as I have been in the Compiling of it, it neen not be long before it be exposed to the view of Artists as well as o-

thers. But to reitterate our former matter, The Spring Quarter Commenceth according to the former Figure and Calculation, in which we find ♈ Ascending and ♄ Lord thereof posited in the 12 house, in his own sign, who according to Authors is not only Lord of the Ascendant, but of the whole Figure, he is in exact ☐ or ☍ and ☉ in ♈, hence this can be no pleasing position to us, if ♈ be *Englands* Ascendant, as all Authors term it, the ☽ also in ♑ Angular where she receives her bitterment, imports all our grave Counsels to be misunderstood by the Common people, who seem to be very uneasie and dissatisfied, and if this be all 'tis not much material, for there was always a sort of people that was ever disturbed in their minds, uneasie in their proceedings, and unfortunate in both, but if we consider ♄ in △ to ♀ and both in their greatest dignities, we cannot but conclude *Ireland* to be in a very prosperous way in recovering their former loss, and in being victorious against their most inveterate enemies, who makes them now some answerable return for their late Officious favour, let time demonstrate in what kind, and if I mistake not in reading the Language of the Stars, *France* will suffer deservedly for their Pride, Contempt of Justice, Violating of Laws, and for taking revenge of the Innocent, and Spilling the blood of the guiltless. Capital Crimes (certainly) will meet with a reward answerable to their deserts, ♄ also is ☌ to ♅ in the 7th, from the Tropical Signs ♋ and ♑, which is of a material signification to those Cities, places, and Countries signified thereby, ♅ and ☌ in ♂ in ♋ in the 7, and both in ☌ to ☽ in the Ascendant, shews bloody doings abroad, let the Grand Visier (with his *French* assistants) consider of his approaching fate, or learn to be wise in time, for perhaps 'tis not his best way to refuse a peace of almost any terms, least he repent it too late. The Scheme in General seems to promote Wars, Slaughters, and much bloud-shed in many places of the World, tho we in *England*, *Ireland*, &c. seem to be as happy as any Nation in these parts of the World, for ♂ patron

of *England* △ to the Tenth house his own dignities denotes no less, but I fear the ☌ of ♄ and ♂ from ♐ and ♍ produceth an unseasonable and wet season, which will (I fear) considerably raise the price of all sorts of Grain. I shall now make no further scrutiny into the Astrological Cabinet of Heaven, yet I say (if my Judgment do not exceedingly fail) we are like to see as eminent alterations and changes upon Earth, as our eyes ever yet beheld, and this (I suppose) may come to pass in a few years, yet let me not be misinterpreted in this, for I do not say positively such things will follow, but I say they are likely to be according to the ordinary course of Nature, unless it please the Almighty to dispose otherways, and so frustrate the portents of heaven.

Est namque Calum (saith *Thomas de vio Cajetanus* upon the 104 Psalm) *vehiculum divinæ virtutis, quo mediante motu, & lumine densitatum, ac stellarum ipsius, tanquam secundis causis, Deus cuncta hæc inferiora, & elementaria corpora ordinat atque disponit.*

In this Radical part of the Revolution are these Notable Configurations.

Die 12 *Martii* ☒ ☽ ♄. 15 □ ♅ ☿. 20 ☒ ♂ ☿. 23 ♂ ♀ ☿. 25 ☒ ☉ ♅. 26 △ ♄ ☿. 29 ☒ ♂ ♀ *Die* 2 *Aprilis* ♂ ☉ ☿. 11 ☒ ☽ ♂. 12 △ ☉ ♄. 14 ☒ ♅ ☿. 20 ♂ ☉ ☿. 25 ☒ ♂ ☿. *Die May* 15 ☒ ♃ ☿. 27 ☒ ♂ ☿. 29 △ ♄ ☿. *Die* 6 *Junii* △ ♄ ♂.

The beginning of this Spring Quarter proves very unseasonable and full of wet, the middle indifferent temperate, but the latter end more propitious, mild and gentle, in all respects fitting the season.

Of the Summer Quarter.

THE Summer Quarter is always said to begin when this our Earthly Globe inclining Southward 23 degrees 29 min. 15 sec. towards the Sun, will Volve and remove us her Nor-

Northern Inhabitants to the greateſt portion of day, or when the Sun (according to appearance) enters into the firſt minute of ♎, which either way taken falleth on Sunday. *June* the 10 day at 15 hours 41 *P. M.* or more truely on the 11 day 41 min. paſt 3 in the morning.

In this part of the Revolution happen theſe remarkable Configurations,

Die Junius 11 ☌ ☉ ♄. 15 ☌ ♄ ♆. 20 ☌ ☉ ♆. 31 ☌ ☉ ♇. *Julius Die* 16 △ ♄ ♆. 18 ☌ ☉ ♅. 21 ☐ ♄ ☌. 22 ☐ ☌ ☿. 23 ☌ ♄ ♀. *Die Auguſtus* 9 △ ☉ ♄. 27 ☌ ☉ ♇. *Die* 2 *September* ☌ ♅ ☿. 6 ☐ ☉ ♄. 11 △ ♄ ☿.

The ☌ of ☉ and ♄ on the 12 day of *June* puts the Armies in motion, and the ☐ of ♄ and ☐ *July* 21 brings news of Scarlet doings abroad, which we perhaps ſhall hear on towards the latter end of *July*, or the beginning of *Auguſt* at fartheſt, which I hope will be Welcome news to *England*.

The beginning of this Quarter is full of wet of unſeaſonable weather, and the middle I fear will not be much better, which will prove ill for the Hay in *June* and *July*, but the latter end, viz. *Auguſt* and *September* prove Seaſonable and well for the Harveſt,

Of the Autumn Quarter.

THE Autumn or Harveſt Quarter beginneth at ſuch time as the Sun toucheth the firſt ſcruple of the Equinoctial ſign ♎, or more really when the Earth enters ♈, hath volved her ſelf at right Angles to the Sun, and receiveth a like portion of light and darkneſs, which either way taken, happens this Year on Wedneſday the 12 day of *September* at 41 min. paſt 4 *poſt meridiem*, or afternoon.

This

This part of the years Revolution produceth thoſe following Configurations.

Die 22 ☐ ♄ ☿. *Die Octobe*r 7 ☐ ♄ ♀. 8 ☌ ☉ ☿. 13 ☐ ♐ ☾. 26 ☐ ♃ ☿. *Die November* 7 ☐ ♐. 8 ☍ ☿ ♂. 18 △ ♐ ☿. 22 ☐ ♃ ♀. 24 ☌ ♄ ☿. 27 △ ♐ ☾. *Die December* 8 △ ☉ ♑. 9 ☌ ♄ ☾. ☌ ♂ ♄ ☿.

The Heavenly bodies are yet the Trumpeters of wars and diſſenſions at the beginning of this quarter, but at the latter end, viz. *December* the 9 we find the two Maliſects Conjoyned in ♈, which will prove of a moſt miſchievous tendency I fear, but in what kind, time, and place, I ſhall leave for time to tell, God preſerve *England* from all the treacherous deſigns of bloody minded people.

The weather at the beginning of this Quarter proves ſeaſonable and well, about the middle of *October* ſtorms, and at the latter end alſo, *November* is infeſted with Froſts, and the latter end of the quarter verry Ridged weather.

Of the Winter Quarter.

THE laſt Quarter called Winter makes its entrance at ſuch time as our Earthly Globe by its Circumrotation hath volved it ſelf to the greateſt Northern inclination, whereby we being furtheſt deflected from the Suns Raies, receive leaſt light, and cauſes our ſhorteſt day and longeſt night, or (according to appearance) when the Sun enters ♈, which either way taken, falls this year upon Monday *December* 10 at 1 hours 48 min. P. M. or more vulgarly upon Tueſday *December* 11 48 min. paſt 6 in the morning.

The latter part of the Revolution will appear to be these Celestial Aspects and meetings.

Die December 10 ☌ ♄ ☿. 12 ☌ ☉ ☿. 15 △ ♅ ☿. 16 ☌ ☉ ♄. 17 ☌ ♀ ☿. 18 △ ♅ ☿. 24 ☌ ♄ ☾. 29 △ ♅ ☿. *Die Januarii* 7 ☌ ☉ ♂ 11 ☌ ♄ ☿. 15 ☌ ♂ ☾. 33 ☉ ☿. 29 ☌ ♅ ☾. 30 ☍ ☊. *Die Februarii* 5 ☍ ♂. 7 ☍ ♅ ☿. 18 ☌ ☉ ☿. 28 ☌ ♀ ☿. *Martii Die* 8 □ ♄ ☿.

This Quarter is not a time for the moving of Armies, or for us to expect any ingagement in Martial feats, tho perhaps we shall hear of the besieging of some great place by a potent enemy, tho to little purpose, however there is some mischievous Consultations now on foot, but let the wretched contrivers thereof beware what they do, for a deserved success attends them, but according to the motions and Configurations of the Heavenly Bodies of this quarter, our affairs in *England* succeed well, and in all probability is like so to continue.

The beginning of this Quarter is attended with cold cloudy and frosty weather, in *Jan.* and *Feb.* 1695 expect more of winterly weather, and the beginning of *March* fair and seasonable.

Of the Eclipses this Year 1694.

WIthin the Perimeter of this Years Revolution will happen to us the Inhabitants of this Terrestial Globe the Earth, Four Eclipses, *viz.* two of the Sun, and two of the Moon, whereof two will be only Visible to us here in *England*, *viz.* one of the Sun, and one of the Moon, they all happen as followeth.

The first is an Eclipse of the Moon *January* 1 at noon, to be seen by our Antipodes.

The second Eclipse is of the the Sun, and may be seen of

of us here in *England* if the Air be clear, on the 12 day of *June*, as the following Calculation from our *Scientia Stellarum* directs.

	S D.	D H.	′	″
Middle time of the true ☌ ☉ & ☽ 1694 *June*	12	3	54	31
True place of the Sun	♋	1	26	17
Excentrick place of the Moon	♋	1	26	17
Mean Anomaly of the Sun.	11	23	54	41
Mean Anomaly of the Moon	0	21	0	40
Argument of the Moons Latitude	5	27	18	48
True Latitude of the Moon North			14	16
Hourly motion of the Sun			2	25
Hourly motion of the Moon			29	52
Hourly motion ☽ á ☉			27	29
Reduction Add				38
Time of Reduction Substract			1	23
True Ecliptic Conjunction *June*	12	3	55	54
Equation of time Substract				29
Apparent time of the true ☌ *June*	12	3	55	25
Horizontal Parallax ☽ á ☉			58	40
Parallax of Longitude			27	45
Parallax of Latitude			31	22
To 1 hour preceding the true ☌ *viz.*		2	55	25
Parallax of Longitude is			22	21
Difference Parallax Longit. sub.			5	24
Visible hourly motion ☽ á ☉			22	5
Interval of the true and visible ☌ Add	0	1	15	24
Hence the visible ☌ is *June*	12	5	10	49
At which time the Parallax of Longit. is			31	38
Distance ☉ and ☽ at that time			32	38
Parallax of Latitude South			35	24
True Latitude of the Moon No. Dec.			10	29
Visible Latitude of the Moon South			24	35
Semidiameter of the ☉			16	1
Semidiameter of the ☽			14	54
Sum of the Semidiameters			30	55
Scruples deficient			6	00
Digits Eclipsed 2° 15′ 26″		2	15	26

Scruples

Scruples of Incidence		28	49
Two hour before the Visible ☌ *vit.*	4	10	49
The Parallax of Longitude is		28	44
Hourly difference of the Parallax of Longit.		2	54
Hence the Visible hourly motion		24	35
Time of Incidence		44	42
Two hour after the visible ☌ *vit.*	6	10	49
The Parallax of Longitude is		36	51
Hourly difference of the Parallax of Longit.		5	13
Visible hourly motion		22	16
Time of Repletion		59	21
Hence the duration of the Eclipse is 1ʰ 34′ 3″	1	34	3

Hence	H.		
The beginning of the Eclipse is	4	20	17
The middle or greatest Obscuration	5	4	59
The Visible Conjunction	5	10	49
The end of the Eclipse	5	54	20

Visible Latitude ☽ at beginning south		20	28
Visible Latitude ☽ at the end south		27	36

The third Eclipse is of the Moon, the 26 day of *June*, the middle or greatest Obscuration is 13 hours 10′ 38″, P.M. or *June* the 27 day 10′ 38″ past 1 in the morning, but it is so small a defect that the best eyes cannot discern it, tho I do not deny but some part of the Moons body will be darkned, thô so very little that 'twill hardly be seen with Glasses, for the Summ of the Horozontal Parallaxes of ☉ and ☽ is 60′ 50″, from which taking 16′ 01″ the Suns Semidiameter, and there remains 44′ 49″ the Semidiameter of the Earths Shaddow, to which adding 15′ 32″ the Moons Semidiameter, and the Aggreate is 1° 1′ 22″, from which taking 1° 1′ 5″ the North-Latitude of the Moon, and there remains 19″ for the parts or Scruples deficient, which Converted into Digits makes but 9′ 30″ for the parts darkned in this Eclipse, being not fully one Eighth part of one Digit.

The

The fourth and last will be an Eclipse of the Sun on *December* the 6 day near 5 at night, therefore cannot be seen of us, but will be visible in the South parts of the earth in the *Pacifick-Sea*, and in the Straights of *Magellanes*, &c.

Miracles in the Eclipse of the Sun observed at our Blessed Saviours Death.

THE Sun is never Eclipsed but at New Moon, but it was then at the time of the Full Moon, and besides the Suns Eclipse is almost always partial, and if at any time it chance to be total, yet 'tis without continuance; but it was total then, and so continued 3 hours, and then Eclipse began at the wrong side of the Sun, and so it ended, insomuch that an Astronomer then in *Egypt (Dionysius Areopagita)* beholding it and little knowing of Christs Death, cried out in admiration, *Aut Deus naturæ patitur, aut mundi machina dissolvetur*, the Sun having put on a mourning Robe, as if he would be a mourner at Christs Death.

Phlegon Trallianus, and *Apollophanes* (as *Gregory* of *Oxford* insinuates) affirm'd it to be a total Eclipse over the whole World.

Eusebius out of the Commentaries of the *Gentiles* hath proved the Eclipse to be miraculous. Also *Lucian* a Priest of *Antioch*, said to the Judges, *Scrutemini annales vestros, videbitis tempore Pilati cessasse lucem media die, & fugatum solem, dum Christus pateretur.* *Tertullian* refers the Ethnicks to those Books in his Apologeticks against the *Gentiles*.
